

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (currently amended): A carbonaceous material for forming an electrically conductive composition, comprising a vapor grown carbon fiber, each fiber filament of the carbon fiber containing a hollow space along the filament in its interior and having a multi-layer structure, an outer diameter of 2 to 500 nm and an aspect ratio of 10 to 15,000, ~~and~~ graphitic particles and ~~and/or~~ amorphous carbon particles, wherein the amount of the vapor grown carbon fiber is 10 to 90 mass%, the amount of the graphitic particles is 30-to 65 mass%, and the amount of the amorphous carbon particles is 70-to 35 mass%.
2. (original): The carbonaceous material for forming an electrically conductive composition according to claim 1, wherein the vapor grown carbon fiber is the carbon fiber containing boron in an amount of 0.01 to 5 mass%, and the amount of the carbon fiber in the carbonaceous material is at least 20 mass%.
3. (original): The carbonaceous material for forming an electrically conductive composition according to claim 1, wherein the vapor grown carbon fiber contains a branched, vapor grown carbon fiber.

4. (original): The carbonaceous material for forming an electrically conductive composition according to claim 1, wherein the vapor grown carbon fiber contains a nodular, vapor grown carbon fiber.
5. (original): The carbonaceous material for forming an electrically conductive composition according to claim 1, wherein the graphitic particles or the amorphous carbon particles have an average particle size of 0.1 to 100 μm .
6. (original): The carbonaceous material for forming an electrically conductive composition according to claim 1, wherein the graphitic particles or the amorphous carbon particles have been thermally treated at 2,000°C or higher.
7. (original): The carbonaceous material for forming an electrically conductive composition according to claim 1, wherein the graphitic particles contain boron.
8. (original): The carbonaceous material for forming an electrically conductive composition according to claim 1, wherein the amorphous carbon particles contain boron.
9. (previously presented): The carbonaceous material for forming an electrically conductive composition according to claim 1, wherein the amorphous carbon particles are formed of carbon black or glassy carbon.
10. (currently amended): The carbonaceous material for forming an electrically conductive composition according to claim 9, wherein the carbon black is at least one species selected from

the group consisting of oil furnace black, gas black, acetylene black, lamp black, thermal black and, channel black ~~and Ketjenblack~~.

11.-12. (canceled).

13. (previously presented): The electrically conductive composition comprising an carbonaceous material as recited in claim 1 and a resin component serving as a binder or a matrix material, and, if desired, a solvent.

14. (currently amended): The electrically conductive composition according to claim 13, wherein, when “a mass%”, “b mass%” and “c mass%” represent the amounts of the vapor grown carbon fiber, the graphitic particles and the amorphous carbon particles contained in the composition, with the proviso that the solvent being excluded from the composition, respectively, a, b and c satisfy the following ~~relations~~:

$$5 \leq a + b + c \leq 80, 1 \leq a \leq 60, 1 \leq b \leq 60, \text{ and } 1 \leq c \leq 30.$$

15. (previously presented): A method for producing an electrically conductive composition characterized by adding a resin component and, if desired, a solvent to the carbonaceous material for forming an electrically conductive composition as recited in claim 1, and kneading the resultant mixture.

16. (previously presented): An electrically conductive coating material characterized by comprising, as an electrically conductive material, an electrically conductive composition as recited in claim 13.

17. (original): The electrically conductive coating material according to claim 16, which is employed as an electrically conductive paste.
18. previously presented): An electrically conductive adhesive characterized by comprising an electrically conductive composition as recited in claim 13.
19. (original): An electrically conductive coating film characterized by being formed by use of an electrically conductive coating material as recited in 18 above.
20. (previously presented): An electronic part characterized by being formed by use of an electrically conductive coating material as recited in claim 16.
21. (previously presented): The carbonaceous material for forming an electrically conductive composition according to claim 8, wherein the amorphous carbon particles are formed of carbon black or glassy carbon.
22. (currently amended): The carbonaceous material for forming an electrically conductive composition according to claim 21, wherein the carbon black is at least one species selected from the group consisting of oil furnace black, gas black, acetylene black, lamp black, thermal black and ~~channel black and Ketjenblack~~.
23. (previously presented): An electronic part characterized by being formed by use of an electrically conductive adhesive as recited in claim 18.
